Abstract:
Source: JP8012621A2 PURPOSE: To provide a process for the purification of a lactic acid ester useful as a safe solvent for a photoresist resin having high dissolving power of the resin. CONSTITUTION: A lactic acid ester produced by a fermentation process is purified by distilling the ester after treating with an activated carbon to lower the absorption of UV of $\leqslant 300$nm wavelength. This process gives a high-purity lactic acid ester having UV absorption at 280nm decreased to $\leqslant 1$, a purity of $\geqslant 99.9\%$ and a low metal content ($\leqslant 10$ppb).
